#### **GENERAL INFORMATION**

#### **Product Description for Equipment under Test (EUT)**

The *GODOX PHOTO EQUIPMENT CO.LTD*'s product, model number: *XT32C (FCC ID: 2ABYNXT32)* (the "EUT") in this report was a *Wireless Power-Control Flash Trigger*, which was measured approximately:10.0 cm (L) x 5.2 cm (W) x 5.0 cm (H), rated input voltage: DC3.0V from battery.

Report No.: RDG160525005-00

Note: The series product, model XT32C, XT32N, XT32S, XT32 are electrically identical, the difference between them are hot shoe, we selected XT32C for fully testing, the details was explained declaration letter.

All measurement and test data in this report was gathered from production sample serial number: 160525005 (Assigned by BACL, Dongguan). The EUT was received on 2016-05-25.

## **Objective**

This type approval report is prepared on behalf of *GODOX PHOTO EQUIPMENT CO.LTD*. in accordance with Part 2-Subpart J, and Part 15-Subparts A, B and C of the Federal Communication Commissions rules.

The tests were performed in order to determine compliance with FCC Part 15, Subpart C, and section 15.203, 15.205, 15.207, 15.209 and 15.249 rules.

#### Related Submittal(s)/Grant(s)

No related submittal(s)/grant(s).

#### **Test Methodology**

All measurements contained in this report were conducted with ANSI C63.10-2013, American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices.

All emissions measurement was performed and Bay Area Compliance Laboratories Corp. (Dongguan).

#### **Test Facility**

The Test site used by Bay Area Compliance Laboratories Corp. (Dongguan) to collect test data is located on the No.69 Pulongcun, Puxinhu Industrial Zone, Tangxia, Dongguan, Guangdong, China

Test site at Bay Area Compliance Laboratories Corp. (Dongguan) has been fully described in reports submitted to the Federal Communication Commission (FCC). The details of these reports have been found to be in compliance with the requirements of Section 2.948 of the FCC Rules on February 06, 2015.

The Federal Communications Commission has the reports on file and is listed under FCC Registration No.: 273710. The test site has been approved by the FCC for public use and is listed in the FCC Public Access Link (PAL) database.

FCC Part 15.249 Page 3 of 22

# **SYSTEM TEST CONFIGURATION**

#### **Justification**

The system was configured for testing in Engineering Mode, which was provided by the manufacturer.

Report No.: RDG160525005-00

The Engineering mode was switched channel by keys.

The device employed 32 operation Channels, as below table:

| Channel<br>Number | Frequency<br>(MHz) | Channel<br>Number | Frequency<br>(MHz) |  |
|-------------------|--------------------|-------------------|--------------------|--|
| 1                 | 2413.0             | 17                | 2439.5             |  |
| 2                 | 2414.5             | 18                | 2441.0             |  |
| 3                 | 2416.0             | 19                | 2443.0             |  |
| 4                 | 2418.0             | 20                | 2444.5             |  |
| 5                 | 2419.5             | 21                | 2446.0             |  |
| 6                 | 2421.0             | 22                | 2448.0             |  |
| 7                 | 2423.0             | 23                | 2449.5             |  |
| 8                 | 2424.5             | 24                | 2451.0             |  |
| 9                 | 2426.0             | 25                | 2453.0             |  |
| 10                | 2428.0             | 26                | 2454.5             |  |
| 11                | 2429.5             | 27                | 2456.0             |  |
| 12                | 2431.0             | 28                | 2458.0             |  |
| 13                | 2433.0             | 29                | 2459.5             |  |
| 14                | 2434.5             | 30                | 2461.0             |  |
| 15                | 2436.0             | 31                | 2463.0             |  |
| 16                | 2438.0             | 32                | 2464.5             |  |

And channel 1, 16, 32 was chose for testing.

## **EUT Exercise Software**

No software was used during testing.

## **Equipment Modifications**

No modifications were made to the EUT.

# SUMMARY OF TEST RESULTS

| FCC Rules                | Description of Test  | Result     |  |  |
|--------------------------|----------------------|------------|--|--|
| §15.203                  | Antenna Requirement  | Compliance |  |  |
| §15.207(a)               | Conduction Emissions | Compliance |  |  |
| 15.205, §15.209, §15.249 | Radiated Emissions   | Compliance |  |  |
| §15.215 (c)              | 20 dB Bandwidth      | Compliance |  |  |

Report No.: RDG160525005-00

FCC Part 15.249 Page 6 of 22

# FCC§15.203 - ANTENNA REQUIREMENT

## **Applicable Standard**

For intentional device, according to §15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used.

Report No.: RDG160525005-00

## **Antenna Connector Construction**

The EUT has an internal antenna, the antenna gain is 0dBi, fulfill the requirement of this section. Please refer to the EUT photos.

Result: Compliant.

FCC Part 15.249 Page 7 of 22

## FCC §15.207 (a) - AC LINE CONDUCTED EMISSIONS

#### **Applicable Standard**

FCC§15.207

## **Measurement Uncertainty**

Compliance or non- compliance with a disturbance limit shall be determined in the following manner:

Report No.: RDG160525005-00

If  $U_{\text{lab}}$  is less than or equal to  $U_{\text{cispr}}$  of Table 1, then:

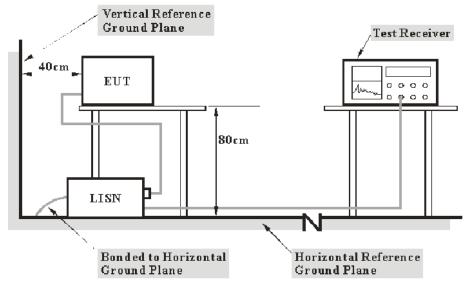

- compliance is deemed to occur if no measured disturbance level exceeds the disturbance limit;
- non compliance is deemed to occur if any measured disturbance level exceeds the disturbance limit. If  $U_{\text{lab}}$  is greater than  $U_{\text{cispr}}$  of Table 1, then:
- compliance is deemed to occur if no measured disturbance level, increased by  $(U_{\text{lab}} U_{\text{cispr}})$ , exceeds the disturbance limit;
- non compliance is deemed to occur if any measured disturbance level, increased by  $(U_{\text{lab}} U_{\text{cispr}})$ , exceeds the disturbance limit.

Based on CISPR 16-4-2-2011, measurement uncertainty of conducted disturbance at mains port using AMN at Bay Area Compliance Laboratories Corp. (Dongguan) is 3.12 dB (150 kHz to 30 MHz).

Table 1 – Values of 
$$U_{\rm cispr}$$

| Measurement   | <b>U</b> cispr |  |
|---|----------------|--|
| Conducted disturbance at mains port using AMN (150 kHz to 30 MHz) | 3.4 dB         |  |

#### **EUT Setup**

Note: 1. Support units were connected to second LISN.

2. Both of LISNs (AMN) 80 cm from EUT and at the least 80 cm from other units and other metal planes support units.

FCC Part 15.249 Page 8 of 22

The setup of EUT is according with per ANSI C63.10-2013 measurement procedure. The specification used was with the FCC Part 15.207 limits.

Report No.: RDG160525005-00

The spacing between the peripherals was 10 cm.

The adapter was connected to a 120 VAC/60 Hz power source

#### **EMI Test Receiver Setup**

The EMI test receiver was set to investigate the spectrum from 150 kHz to 30 MHz.

During the conducted emission test, the EMI test receiver was set with the following configurations:

| Frequency Range  | IF B/W |  |
|------------------|--------|--|
| 150 kHz – 30 MHz | 9 kHz  |  |

#### **Test Procedure**

During the conducted emission test, the adapter was connected to the first LISN.

Maximizing procedure was performed on the six (6) highest emissions of the EUT.

All data was recorded in the Quasi-peak and average detection mode.

## **Corrected Amplitude & Margin Calculation**

The basic equation is as follows:

$$V_C = V_R + A_C + VDF$$
$$C_f = A_C + VDF$$

Herein,

V<sub>C</sub> (cord. Reading): corrected voltage amplitude

 $V_R$ : reading voltage amplitude  $A_c$ : attenuation caused by cable loss VDF: voltage division factor of AMN

C<sub>f</sub>: Correction Factor

The "Margin" column of the following data tables indicates the degree of compliance within the applicable limit. For example, a margin of 7dB means the emission is 7dB below the maximum limit. The equation for margin calculation is as follows:

Margin = Limit – Corrected Amplitude

FCC Part 15.249 Page 9 of 22

Report No.: RDG160525005-00

## **Test Results Summary**

According to the recorded data in following table, the EUT complied with the <u>FCC Part 15.207</u>, with the worst margin reading of:

#### 23.3 dB at 1.385415 MHz in the Neutral conducted mode

#### **Test Data**

#### **Environmental Conditions**

| Temperature:       | 29.7 °C   |
|--------------------|-----------|
| Relative Humidity: | 59 %      |
| ATM Pressure:      | 100.2 kPa |

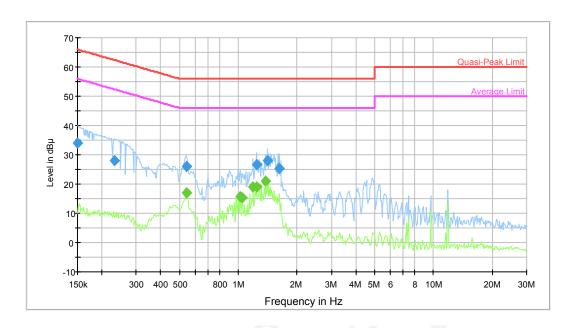

The testing was performed by Robin Zheng on 2016-06-06

FCC Part 15.249 Page 10 of 22

<sup>\*</sup> Statement of Traceability: Bay Area Compliance Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

Test Mode: Transmitting

FCC Part 15.249 Page 12 of 22

## FCC§15.205, §15.209&§15.249- RADIATED EMISSIONS

#### **Applicable Standard**

As per FCC§15.249 (a), except as provided in paragraph (b) of this section, the field strength of emissions from intentional radiators operated within these frequency bands shall comply with the following:

| Fundamental<br>frequency | Field strength of fundamental<br>(millivolts/meter) | Field strength of harmonics (microvolts/meter) |
|--------------------------|---|--|
| 902–928 MHz              | 50  | 500  |
| 2400–2483.5 MHz          | 50  | 500  |
| 5725–5875 MHz            | 50  | 500  |
| 24.0–24.25 GHz           | 250   | 2500   |

Report No.: RDG160525005-00

As per FCC§15.249 (c), Field strength limits are specified at a distance of 3 meters.

(d) Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in §15.209, whichever is the lesser attenuation.

#### **Measurement Uncertainty**

Compliance or non- compliance with a disturbance limit shall be determined in the following manner:

If  $U_{\text{lab}}$  is less than or equal to  $U_{\text{cispr}}$  of Table 1, then:

- compliance is deemed to occur if no measured disturbance level exceeds the disturbance limit;
- non compliance is deemed to occur if any measured disturbance level exceeds the disturbance limit. If  $U_{\text{lab}}$  is greater than  $U_{\text{cispr}}$  of Table 1, then:
- compliance is deemed to occur if no measured disturbance level, increased by  $(U_{lab} U_{cispr})$ , exceeds the disturbance limit;
- non compliance is deemed to occur if any measured disturbance level, increased by  $(U_{\text{lab}} U_{\text{cispr}})$ , exceeds the disturbance limit.

Based on CISPR 16-4-2: 2011, measurement uncertainty of radiated emission at a distance of 3m at Bay Area Compliance Laboratories Corp. (Dongguan) is: 30M~200MHz: 4.58 dB for Horizontal, 4.59 dB for Vertical; 200M~1GHz: 4.83 dB for Horizontal, 5.85 dB for Vertical; 1G~6GHz: 4.45 dB, 6G~18GHz: 5.23 dB

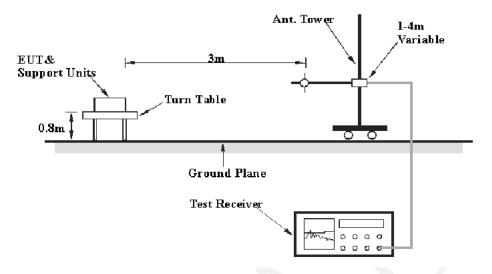

Table 1 – Values of  $U_{cispr}$ 

| Measurement  |        |  |  |  |
|--|--------|--|--|--|
| Radiated disturbance (electric field strength at an OATS or in a SAC) (30 MHz to 1000 MHz) | 6.3 dB |  |  |  |
| Radiated disturbance (electric field strength in a FAR) (1 GHz to 6 GHz)                   | 5.2 dB |  |  |  |
| Radiated disturbance (electric field strength in a FAR) (6 GHz to 18 GHz)                  | 5.5 dB |  |  |  |

FCC Part 15.249 Page 13 of 22

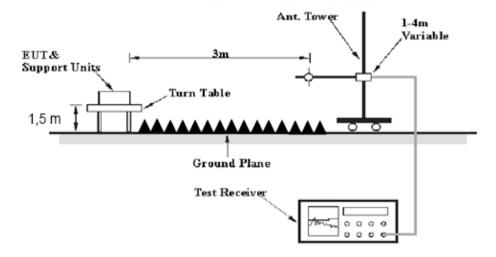

## **EUT Setup**

Below 1 GHz:

Report No.: RDG160525005-00

Above 1 GHz:

The radiated emission and out of band emission tests were performed in the 3 meters chamber test site, using the setup accordance with the ANSI C63.10-2013 The specification used was the FCC 15.209/15.205 and FCC 15.249 limits.

## **Test Equipment Setup**

The system was investigated from 30 MHz to 25 GHz.

During the radiated emission test, the EMI test receiver & Spectrum Analyzer Setup were set with the following configurations:

FCC Part 15.249 Page 14 of 22

| Frequency Range   | RBW     | Video B/W | IF B/W  | Detector |
|-------------------|---------|-----------|---------|----------|
| 30 MHz – 1000 MHz | 120 kHz | 300 kHz   | 120 kHz | QP       |
| Above 1 CHz       | 1MHz    | 3 MHz     | /       | PK       |
| Above 1 GHz       | 1MHz    | 10 Hz     | /       | Ave.     |

Report No.: RDG160525005-00

#### **Test Procedure**

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations.

All data was recorded in the Quasi-peak detection mode from 30 MHz to 1GHz, peak and average detection mode above 1 GHz.

#### **Corrected Amplitude & Margin Calculation**

The Corrected Amplitude is calculated by adding the Antenna Factor and Cable Loss, and subtracting the Amplifier Gain from the Meter Reading. The basic equation is as follows:

Corrected Amplitude = Meter Reading + Antenna Factor + Cable Loss - Amplifier Gain

The "Margin" column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 7dB means the emission is 7dB below the limit. The equation for margin calculation is as follows:

Margin = Limit –Corrected Amplitude

FCC Part 15.249 Page 19 of 22

## FCC §15.215(c) – 20 dB BANDWIDTH TESTING

#### **Applicable Standard**

Intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§ 15.217 through 15.257 and in Subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated.

Report No.: RDG160525005-00

#### **Test Procedure**

- 1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
- 2. Position the EUT on the test table without connection to measurement instrument. Turn on the EUT. Then set it to any one convenient frequency within its operating range. Set a reference level on the measuring instrument equal to the highest peak value.
- 3. Measure the frequency difference of two frequencies that were attenuated 20 dB from the reference level. Record the frequency difference as the emission bandwidth.
- 4. Repeat above procedures until all frequencies measured were complete.

## **Test Equipment List and Details**

| Manufacturer | Description       | Model           | Serial<br>Number | Calibration<br>Date | Calibration<br>Due Date |
|--------------|-------------------|-----------------|------------------|---------------------|-------------------------|
| R&S          | Spectrum Analyzer | FSP 38          | 100478           | 2015-11-23          | 2016-11-22              |
| E-Microwave  | DC Blocking       | EMDCB-<br>00036 | 0E01201047       | 2016-05-06          | 2017-05-06              |
| N/A          | Coaxial Cable     | 0.1m            | N/A              | 2016-05-06          | 2017-05-06              |

<sup>\*</sup> Statement of Traceability: Bay Area Compliance Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

#### **Test Data**

#### **Environmental Conditions**

| Temperature:       | 27.2 °C  |
|--------------------|----------|
| Relative Humidity: | 45 %     |
| ATM Pressure:      | 99.8 kPa |

The testing was performed by Robin Zheng on 2016-06-02.

**Test Result:** Compliant.
